# Chapter 1

## FlowGroup Directory Hierarchy

### 1.1 FlowGroup Directories

This directory hierarchy is sorted roughly, but not completely, alphabetically:

src . . . . .	5
---------------	---

## Chapter 2

# FlowGroup Class Index

### 2.1 FlowGroup Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">ftk::FlowGroup</a> . . . . .	7
--	---

## **Chapter 3**

# **FlowGroup Directory Documentation**

### **3.1 src/ Directory Reference**

#### **Files**

- file **FlowGroup.cxx**
- file **FlowGroup.h**

# Chapter 4

## FlowGroup Class Documentation

### 4.1 ftk::FlowGroup Class Reference

#### Public Types

- enum { **ORIENTATION\_HORIZONTAL** = 0, **ORIENTATION\_VERTICAL** = 1 }

#### Public Member Functions

- [FlowGroup](#) (int x, int y, int w, int h, const char \*l=0)
- void **layout** ()
- int [column\\_gap](#) () const
- void [column\\_gap](#) (int g)
- int [row\\_gap](#) () const
- void [row\\_gap](#) (int g)
- void [align\\_widget](#) (Flags a)
- Flags [align\\_widget](#) () const
- Flags [orientation](#) () const
- void [orientation](#) (Flags o)

#### 4.1.1 Detailed Description

Align like a flow of widgets. A widget is placed in available space after another widget and maintain a flow in specific orientation.

Definition at line 35 of file FlowGroup.h.

#### 4.1.2 Constructor & Destructor Documentation

##### 4.1.2.1 FlowGroup::FlowGroup (int X, int Y, int W, int H, const char \* l = 0)

Construct a Flow Group

Definition at line 94 of file FlowGroup.cxx.

### 4.1.3 Member Function Documentation

#### 4.1.3.1 Flags FlowGroup::align\_widget () const [inline]

Returns the alignment value

See also:

void FlowGroup::align\_widget(Flags a)

Definition at line 52 of file FlowGroup.h.

#### 4.1.3.2 void FlowGroup::align\_widget (Flags a) [inline]

Sets the alignment value *a*.

The value can be any of these constants

- ALIGN\_CENTER (Both orientation)
- ALIGN\_LEFT (Only horizontal orientation)
- ALIGN\_RIGHT (Only horizontal orientation)
- ALIGN\_TOP (Only vertical orientation)
- ALIGN\_BOTTOM (Only vertical orientation)

Internally ALIGN\_LEFT equivalent to ALIGN\_TOP and ALIGN\_RIGHT equivalent to ALIGN\_BOTTOM.

For good readable code one should use proper constant.

Definition at line 51 of file FlowGroup.h.

#### 4.1.3.3 void FlowGroup::column\_gap (int g) [inline]

Sets the space or gap *g* between two consecutive columns

Definition at line 48 of file FlowGroup.h.

#### 4.1.3.4 int FlowGroup::column\_gap () const [inline]

Returns the space or gap between two consecutive columns

Definition at line 47 of file FlowGroup.h.

#### 4.1.3.5 void FlowGroup::orientation (Flags o) [inline]

Sets the orientational value *o*.

The value can be any of these constants

- ORIENTATION\_HORIZONTAL
- ORIENTATION\_VERTICAL

Definition at line 54 of file FlowGroup.h.

**4.1.3.6** Flags `FlowGroup::orientation () const` [inline]

Returns the orientational value

See also:

void [FlowGroup::orientation\(Flags o\)](#)

Definition at line 53 of file FlowGroup.h.

**4.1.3.7** void `FlowGroup::row_gap (int g)` [inline]

Sets the space or gap *g* between two consecutive rows

Definition at line 50 of file FlowGroup.h.

**4.1.3.8** int `FlowGroup::row_gap () const` [inline]

Returns the space or gap between two consecutive rows

Definition at line 49 of file FlowGroup.h.

The documentation for this class was generated from the following files:

- src/FlowGroup.h
- src/FlowGroup.cxx
